

Dr. Broue's Opinion of the  
Healing Waters of Desert Hot Springs.

*“The call of my business has taken me throughout Europe, divisions of Australia, Africa, North and South America and Indochina, and intensively into the thermal regions of New Zealand. I have been acting for years as a chemist and investigator of soils, waters, plant life and bacteria, the reports I have made have been extensive and very thorough. The extent of my researches has enabled me to make comparisons for practical commercial values.*

*On a recent trip to Australia, I was detained in the Los Angeles area and I made an investigation of the waters found in Desert Hot Springs, CA also the soil and geological formations. From the analysis of these waters, I have not found the like of them in any country I have explored.*

*What has surprised me the most is the mineral content of the water. It is a pronounced curative agency, as is the air. It could be bottled and shipped everywhere. From the waters can be precipitated the suspended minerals and they can be transported in proper cartons for revival in distilled or rain water, for drinking and medicinal uses. They can also be used in cooking. They will impart to food when cooked the radio-activity values. It would appear to have qualities far superior to any waters known to me.*

*Under proper directions, Desert Hot Springs could become a very important health center. Ailments such as rheumatism, arthritis, lumbago, and deep-seated blood complaints should readily yield to treatment there.”*
